

Together against the spread by COVID-19

Effective immediately, the OASE Group will discontinue production in the group's own plant in Hof (Bavaria) for production of disinfectant to supply to healthcare. Where up to now pond care products have been produced additional disinfectants now run off the production line. OASE is thus using its existing possibilities to support in covering the large demand.

In the current situation every day brings new challenges. Not only the world of work is affected, but all of our everyday lives as well. However, there are many people who, in these difficult times, are working on are in the front line: whether in medical facilities or retail outlets, in pharmacies or cleaning services, as logistics service providers or as civil servants in the fire brigade and police. The people who work in the so-called „systemically important professions“ keep our society running.

The OASE Group makes its contribution

A prerequisite for the safe performance of these activities is appropriate work equipment such as for example disinfectants, respirators and medical equipment. The extremely high demand for these materials can only be met through the joint efforts of all companies which have the possibility to produce these products. The OASE Group is committed to its responsibility and focusses existing production capacities for the manufacture of disinfectant.

On behalf of Bavarian State Office for Health and Food Safety

Where otherwise pond care products and other products from the Water Technology division of the manufacturer SÖLL, which has been part of the OASE Group since March 2019, now disinfectant is produced. The surface disinfectant concentrate AquaDes is produced on site, filled in canisters and is intended for commercial use. The OASE Group produces by order of the Bavarian State Office for Health and Food Safety to combat the spread of the disease of COVID-19.
